## Executive Summary

This report is an update to the Market Analysis for the City of Travelers Rest published in July 2012. This revised report provides up-to-date retail and demographic data to supplement the market analysis work conducted as part of the 2012 project.

In 2003, Arnett Muldrow \& Associates developed an economic development plan for the City of Travelers Rest. Between 2003 and 2012, the City successfully implemented many of the plan's recommendations, including the completion of the Swamp Rabbit Trail, downtown streetscape project, community branding initiative, and wayfinding plan. In 2012, the City of Travelers Rest commissioned an update to the economic development plan. The trade area data contained in this report are from that update. All demographic, psychographic, and retail trade data has been updated to 2017 numbers.

In past 5 years, the City of Travelers Rest has made great strides meeting the objectives outlined in the 2012 plan. The success of the community and the growth it and the surrounding area are experiencing continue to accrue to downtown Travelers Rest. It has emerged as a major destination in the region for outdoor recreation, dining, and entertainment.

This report provides 2017 data that updates the information from the 2012 report. Sections of the original report remain intact.

- The Travelers Rest primary trade area (29690, 29635 and 29661 zip codes) experienced $\$ 281.3$ million in annual market leakage, with retail sales of $\$ 266.1$ million for stores in this area compared to $\$ 547.4$ in purchasing power for households in this same area. However, this leakage is not distributed evenly across market segments, with some retail segments registering significant sales leakage and others with outsized gains.
- The Travelers Rest secondary trade area (29613, 29617, and 29609 zip codes) generated $\$ 573.1$ million in retail sales and $\$ 1.05$ billon in consumer expenditures over the past year, indicating an annual leakage of $\$ 480$ million.
- The combined trade area for Travelers Rest is a "leaking market" to the tune of $\$ 761$ million each year. Opportunities exist for Travelers Rest to capture retail leakage in select categories including restaurants, clothing and general merchandise.

### 1.0 Introduction

### 1.1 Background

Travelers Rest, South Carolina is a small city of almost 5,000 in northern Greenville County. Situated on a plateau just south of the Blue Ridge Escarpment, Travelers Rest was once a place where wagon trains and wealthy Lowcountry families would stop and rest before ascending into the mountains. Today, Travelers Rest lays claim to a community larger than its incorporated limits, with neighborhoods and golf courses ringing the City and Furman University and North Greenville University to the south and north, respectively. Travelers Rest also features two major thoroughfares: U.S. Highway 25, a key route to Asheville, North Carolina and points north; and U.S. Highway 276, also the City's Main Street, which winds its way north to Caesar's Head and into downtown Brevard, North Carolina. Both highways converge just south of Travelers Rest on their way into downtown Greenville.

The US 25 corridor continues to thrive as restaurants cluster around Walmart. Downtown Travelers Rest continues to grow and thrive with extensive renovation of buildings, new infill housing development, and proposals for additional downtown revitalization. This success has earned Travelers Rest regional accolades and national attention.

The City of Travelers Rest desires to continue to stay up to date on its retail trends and growth. The Downtown has increased in property value by $62 \%$ since 2004 and retail/ restaurant sales have dramatically increased.

### 1.2 2012 Planning Process

In February 2012, the City of Travelers Rest hired Arnett Muldrow \& Associates to complete a detailed citywide market analysis and economic development study. This study is designed to provide insight into trade patterns, potential recruitment targets, and marketing strategies for Travelers Rest for the coming five years with the realization that Travelers Rest is likely to see significant changes during this time. The planning process for this study included several key components, each of which is detailed below.

### 1.2.1 Background Review

Prior to project kick-off, the Consultants reviewed the following documents:

- Retail Market Study (2003): This study, completed by Arnett Muldrow \& Associates, provides a market snapshot and strategic economic development recommendations for Travelers Rest. Key insights of this study included the identification of a market opportunity for a large general merchandiser (Walmart entered the local market less than three years later) as well as the potential for the conversation of an abandoned rail corridor into what is now the Swamp Rabbit Trail.
- Travelers Rest Comprehensive Plan (2006): This report, developed by the Greenville County Planning Department in conjunction with the City of Travelers Rest, provides a community portrait that describes the city's natural, cultural, recreational assets as well as its demographic, economic, and land use profile. The comprehensive plan also recommends a series of community goals as well as strategies, tactics, and timeframes to accomplish them.
- Downtown Streetscape Plans (2006 \& 2009): These projects, completed by Arnett Muldrow \& Associates in conjunction with Arbor Engineering, identified key streetscape improvements needed to create a safer, pedestrian-friendly environment in downtown Travelers Rest. The results of these plans are visible today in the community's vastly improved Main Street corridor.
- Swamp Rabbit Trail Impact Study (2012): This document is the first edition of a multi-year study of trail users and the economic impact of the Swamp Rabbit Trail, the multiuse trail which currently runs some fifteen miles from Greenville Tech to North Greenville Hospital through downtown Travelers Rest. The study, which was published by Upstate Forever in conjunction with the Greenville County Recreation District and Professor Julian Reed of Furman University, examines the "who," "when," "why," and "how"' of trail users in an effort to better understand the community impact of the Swamp Rabbit Trail.

### 1.2.2 Community Engagement

Throughout the planning process, the Consultants engaged the Travelers Rest community in multiple ways, including:

- City Council retreat: On February 18 in Brevard, North Carolina, the Consultant met with members of City Council (including the Mayor) and the City Administrator to discuss their vision for Travelers Rest and various goals for the next several years.

This retreat also included a conversation with the City Administrator and Mayor of Brevard, who both stressed the need for greater dialogue and connections between the two U.S. 276 corridor cities.

- Stakeholder roundtables and interviews: On March 12-13, 2012, the Consultants conducted a series of interviews with community stakeholders. Interviewees included local merchants, business leaders, elected officials, public-sector employees, organizational representatives, and local residents. On several other occasions from March to May, the Consultants conducted additional interviews.
- Zip code surveys: Twenty-three local merchants participated in a zip code survey of customers in February and March 2012. The Consultants used the data collected during the weeklong survey period to inform the retail market analysis in Chapter Two of this study.
- Interim reports: The Consultants presented their work-to-date to City Council on March 15, April 19, and June 11, 2012. In addition to offering preliminary observations on market data and emerging themes, the Consultants requested and received additional input and guidance from Council members regarding strategies and recommendations.

### 1.2.3 Market Analysis

Twenty-three merchants throughout Travelers Rest conducted a zip code survey of customers in late February and early March 2012. The zip code data provided valuable information for the market definition study and retail leakage analysis provided in Chapter Two of this report. The Consultants coupled their market research with a series of one-on-one interviews and roundtables with business owners, community stakeholders, and City Council to craft a series of goals, strategies, and specific recommendations for the City of Travelers Rest and its partners to pursue.

### 1.2.4 Commercial Real Estate Snapshot

In April 2012, the Consultants inventoried all properties along the Main Street and U.S. Highway 25 corridors and included information on business type, availability, and conditions. This inventory details the existing conditions in Travelers Rest and is detailed in Chapter Three of this report.

### 1.2.5 Economic Development Study

The economic development study is rooted in data provided by the market analysis and commercial real estate snapshot. The goals, strategies, and recommendations of the economic development study are detailed in Chapter Four of this report.

In June 2012, Randy Wilson of Community Design Solutions developed a series of photo renderings to illustrate the appearance of proposed redevelopment opportunities on selected properties in the City. These renderings are also featured in Chapter Four.

### 1.2.6 Project Wrap-Up

On July 19, 2012, the Consultants presented their final recommendations to City Council and selected community stakeholders. The following week, they delivered this report to the City.

### 1.3 Acknowledgments

This study would not have been possible were it not for the participation of many citizens and businesses in Travelers Rest who took time out to track customers, share ideas, and provide feedback on the project. A special thanks goes to the Mayor and City Council for their advice and insight, and to City Administrator Dianna Turner, who organized the interview schedule, coordinated the zip code survey with local merchants, and provided valuable insight and assistance throughout the project.

### 2.0 Retail Market Analysis

This chapter presents the findings of the retail market research for Travelers Rest and sets the stage for further analysis that can be used to recruit businesses, help existing businesses target customers, and implement the goals and recommendations of the economic development study in Chapter Four of this report. The goal of this retail market study is to show community stakeholders and potential investors how to capitalize on potential retail trade and to leverage investments that will sustain downtown Travelers Rest, the U.S. Highway 25 corridor, and other areas of the community.

The chapter is divided into five sections:

Section 2.1 describes the market definition based on zip code survey work completed by businesses in the community. It also provides insight into Travelers Rest's trade area demographics and presents market data related to Travelers Rest's Primary and Secondary Trade Areas.

Section 2.2 provides demographic profiles of Travelers Rest's primary and secondary trade areas.

Section 2.3 presents a more detailed market segmentation of the Travelers Rest primary trade area using PRIZM® Lifestage characteristics. (PRIZM® is a product of Claritas.)

Section 2.4 presents the retail market analysis that shows the amount of retail sales "leaking" from Travelers Rest's primary and secondary trade areas. This information is based on the most recent data available and is a reliable source for understanding overall market patterns. This section concludes with some key opportunities for retail that could be used to both enhance existing businesses and recruit additional businesses to downtown.

Section 2.5 summarizes Travelers Rest's current retail environment, describing market characteristics and trends.

### 2.1 Market Definition

Unlike radial and drive time studies that use arbitrarily chosen boundaries for customer trade zones, the market definition exercise for Travelers Rest is based on zip code survey work completed by cooperative merchants. Zip code surveys have their own limitations, as a zip code geography can be fairly large and stretch beyond typical market boundaries. However, it is the only technique that correlates clearly with customer traffic collected by merchants. Recorded zip codes are used to define primary and secondary trade areas, which are then analyzed in terms of demographics and economic activity.

Twenty-three Travelers Rest retail businesses graciously participated in the zip code survey of their customers the week of February 27-March 4, 2012. Merchants were provided with a form to record customer zip codes and asked to keep the log for all customers during a seven-day period.

### 2.1.1 Zip Code Results

The results of the zip code survey are presented in Figure 1 and summarized as follows:

- In all, Travelers Rest businesses recorded 1,572 individual customer visits from 135 unique American zip codes representing nineteen states, Canada, and Australia.
- The Travelers Rest zip code 29690 had the most visits of any zip codes with thirtyseven percent of customers coming from this geographic area. As indicated in Figure l, sixteen percent of recorded visits came from people who live in the City of Travelers Rest, while another twenty-one percent came from people who live outside the City limits but within the 29690 zip code.
- The Greenville 29617 zip code recorded ten percent of the overall visits and was the second most often cited zip code. (This zip code includes residents of Green Valley and other households that likely consider themselves part of Travelers Rest.)
- Other neighboring zip codes (Greenville 29609, Slater-Marietta 29661, and Taylors 29687) accounted for eight, six, and six percent respectively, equaling twenty percent of total visits.
- Other nearby zip codes (Greenville 2961 1, Easley 29640, Cleveland 29635, and Greenville 29601) accounted for eight percent collectively.
- South Carolina residents from outside the Greenville/Taylors area accounted for approximately nineteen percent of the overall visits. The percentage of these "visitors" varied significantly based on the participating business.
- Out-of-state visitors accounted for six percent of the customer visits. Again, this figure varied significantly from business to business.

2012 Customer Visits by Zip Code

Figure 1: Customer Visits to Participating Businesses by Zip Code.

Zip code survey results by merchant are displayed in Figure 2. This chart indicates a wide variation between surveyed results, from a high of 398 to a low of two recorded visits. The survey results showed a median of twenty-eight and a mean of sixty-eight recorded visits. One of the implications of the survey results is that the survey results are skewed in the direction of a handful of participating businesses. Nonetheless, the zip code data collected during the survey reflects local trade patterns as well as different business types (service businesses typically have fewer customers than restaurants, for example).

Figure 2: Zip Code Survey Count by Merchant.

The charts in Figure 3 below display the breakout of customer visits by one of four categories: "Restaurant," "Specialty Retail," "Service," and "General Retail."

Retail and Service businesses demonstrated the highest levels of local customers. These businesses attracted larger shares of the northern Greenville County market as well. This is unsurprising, given the local orientation of these business types. On the other hand, the local share for Specialty and Restaurant categories shrinks to roughly one-third of recorded visits.

The most revealing measurement for Travelers Rest is the visitor market, with roughly one-in-four recorded visits in the Restaurant category coming from individuals living outside the Greenville area. In fact, in one downtown restaurant, the visitor figure was thirty-one percent, with an additional forty-seven percent of recorded visits coming from the Greenville/Taylors market. This combination of visitors and a substantial draw from the Greater Greenville market is a strong source of growth potential for restaurants and specialty retailers in particular.

Figure 3: Zip Code Survey Results by Business Type.

### 2.1.2 Trade Area Definition

Although the number of visits provides an overall view of customer origin, a more accurate way to evaluate customer loyalty is to frame customer visits in the context of the population of each zip code. This method corrects for zip codes that have exceedingly large or small populations that might skew the market penetration data. The primary trade area is the geography where the most loyal and frequent customers to Travelers Rest reside. The secondary trade area represents an area where Travelers Rest businesses can rely on customers, but to a lesser degree.

Table 1 shows customer visits per thousand residents, showing an index allows for an equal comparison of market penetration per zip code. It shows customer visits per thousand people for each of the highest representative visits to Travelers Rest in 2012.

| Zip | Area | Population 2012 | Visits | Visits/1000 |
| :---: | :---: | :---: | :---: | :---: |
| 29690 | Travelers Rest | 21,334 | 591 | 27.70 |
| 29635 | Cleveland | 1,174 | 26 | 22.15 |
| 29661 | Marietta | 6,075 | 95 | 15.64 |
| 29613 | Greenville (Furman) | 2,334 | 19 | 8.14 |
| 29617 | Greenville | 27,863 | 160 | 5.74 |
| 29609 | Greenville | 30,428 | 122 | 4.01 |
| 29687 | Taylors | 41,207 | 96 | 2.33 |
| 29601 | Greenville | 10,719 | 20 | 1.87 |
| 29611 | Greenville | 29,528 | 42 | 1.42 |
| 29640 | Easley | 30,666 | 34 | 1.11 |

Table 1: Customer Visits by Zip Code per One Thousand Population.
Determining the primary and secondary trade areas can sometimes be more "art" than science. At times, significant breaks in customer visits are not obvious. In the case of Travelers Rest, the division for the primary trade area is clear. With nearly twenty-eight visits per thousand residents, Travelers Rest 29690 emerges as the "most loyal" zip code for Travelers Rest. Also included in this category are Cleveland 29635 and Slater-Marietta 29661. Their relatively small populations means they eclipse their more populous neighbors in terms of their customer loyalty.

Three zip codes, Greenville-Furman 29613, Greenville 29617, and Greenville 29609, comprise the secondary trade area for Travelers Rest. Although Greenville 29617 and Greenville 29609 recorded the second and third highest customer visit counts in the zip code survey, their significantly higher populations relegate them to the secondary trade area. At the same time, these two zip codes represent the greatest
potential for market growth in Travelers Rest. The Greenville-Furman 29613 zip code registered just nineteen visits, yet the zip code geography includes just the Furman campus (with just over two thousand student residents). Although the Furman market is proportionately strong, it is one that Travelers Rest has yet to fully capitalize on, and should be a key target (for the downtown market in particular) in the coming years.

Figure 4 displays the extent of the primary and secondary trade areas for Travelers Rest as two adjacent geographies. (The primary trade area is shaded dark green, and the secondary trade area is shaded blue. The City of Travelers Rest is shaded in lighter green.)

Figure 4: Travelers Rest Retail Trade Areas.

### 2.2 Trade Area Demographics

In 2017, the population for Travelers Rest's primary trade area is estimated to be 30,458 . The population is expected to grow by $5.81 \%$ by 2022 to 32,229 . The median household income for the primary trade trea is $\$ 50,017$, up from $\$ 41,795$ in 2012. The income level in the Travelers Rest primary trade area is above that of South Carolina $(\$ 47,735)$ but below the national median income $(\$ 57,462)$.

| Primary Trade Area Population |  |
| :--- | :--- |
| 2000 Census | 25,676 |
| 2010 Census | 28,340 |
| 2017 Estimated | 30,458 |
| 2022 Projected | 32,229 |
| Percent Growth |  |
| $2000-2010$ | $10.38 \%$ |
| $2010-2017$ Estimated | $7.47 \%$ |
| $2017-2022$ Projected | $5.81 \%$ |

Table 2: Primary Trade Area Demographics.

In 2017, the population for Travelers Rest's secondary trade area is estimated to be 61,389 . The population is expected to grow by $5.96 \%$ by 2022 to 64,681 . The median household income of the secondary trade area continues to lag that of the primary trade area. Median household income in the secondary trade are is \$40,365, up 8.6\% from \$37, 157 in 2012.

| Secondary Trade Area Population |  |
| :--- | :--- |
| 2000 Census | 54,219 |
| 2010 Census | 57,449 |
| 2017 Estimate | 61,389 |
| 2022 Projected | 64,681 |
| Percent Growth |  |
| $2000-2010$ | $5.36 \%$ |
| 2010-2017 Estimated | $6.86 \%$ |
| 2017-2022 Projected | $5.96 \%$ |

Table 3: Secondary Trade Area Demographics.

### 2.3 Market Segmentation

Market segmentation is a way to summarize demographic information into easy-to-understand categories. The market segmentation illustrated for Travelers Rest's trade areas uses Claritas PRIZM® data. PRIZM® defines every U.S. household in terms of sixty-eight demographic and behavioral types to help determine lifestyles, purchasing behaviors, and preferences of the customer base. These data are arranged into "Social," "Lifestage," and "Household" groups. Each of these groups is detailed below.

### 2.3.1 PRIZM Social Group Segmentation

Claritas PRIZM provides insight into some of the shared social characteristics with its Social Group Segmentation categories. The majority of households in the Travelers Rest primary trade area can be categorized as one of three social groups: Rustic Living (37\%), Middle America (33\%), or Country Comfort (24\%). Major characteristics of the top four PRIZM Social Groups are described below. (Descriptions are provided by Claritas.)

## PRIZM Social Group Distributions

Figure 5: Primary Trade Area PRIZM Social Group Segmentation. Source: Claritas.

Rustic Living: 37\% of Primary Trade Area
Rustic Living residents have relatively modest incomes, aging homes, and blue-collar occupations. Many of the residents, a mix of young singles and seniors, are unmarried, and they've watched scores of their neighbors migrate to the city. In their remote communities, these consumers spend their leisure time in such traditional small-town activities as fishing and hunting, attending social activities at the local church and veterans club, and enjoying country music and car racing.

## Middle America: 33\% of Primary Trade Area

Middle American households are filled with middle class to lower-middle class homeowners living in small towns and remote exurbs. Typically found in scenic settings throughout the nation's heartland, Middle Americans are a mix of couples and families. Like many residents of remote communities, these conservative consumers tend to prefer traditional rural pursuits: fishing, hunting, making crafts, antique collecting, watching television, and meeting at civic and veterans clubs for recreation and companionship. Friday nights are for celebrating high school sports.

## Country Comfort: 24\% of Primary Trade Area

Country Comfort households are predominantly upper-middle class homeowners. In their placid towns and scenic bedroom communities, these Americans tend to be married, with or without children. They enjoy comfortable upscale lifestyles, exhibiting high indices for outdoor activities like gardening, barbecuing and playing golf, as well as home-based activities such as woodworking and crafts. Reflecting their rural, family environment, they prefer trucks, SUVs, and minivans to cars.

Landed Gentry: 6\% of Primary Trade Area
Landed Gentry househods consist of wealthy Americans who migrated to smaller towns beyond the nation's beltways. Many of the households contain Boomer families and couples with college degrees, expansive homes, and professional jobs. With their upscale incomes, they can afford to spend heavily on consumer electronics, wireless and computer technology, luxury cars, powerboats, books and magazines, children's toys, and exercise equipment.

### 2.3.2 PRIZM Lifestage Segmentation

In the 2012 study, the primary trade area households were distributed evenly across PRIZM LIfestage categories. The 2017 segmentation analysis reveals a shift towards an older population, with $45 \%$ of households in the "Older Years" (in green), 39\% in "Family Life" (in blue) and $16 \%$ in "Younger Years" (in red) categories. Within each Lifestage category, darker shades represent higher socioeconomic status, while paler shades represent lower status.

As is the case in many smaller cities, the population indexes at lower income levels than the rest of the United States. However, there are pockets of affluence within the primary trade area, including "Young Accumulators" (10\%). "Accumulated Wealth" (5\%), and Affluent Empty Nest (1\%).

PRIZM Life Stage Distribution

Figure 6: Primary Trade Area PRIZM Lifestage Segmentation. Source: Claritas.

### 2.3.3 PRIZM Household Segmentation

Table 4 and Figure 7 detail all of the PRIZM® segments included in the primary trade area. There are certain categories that only exist in urban markets and suburban markets that are not shown in this table.

Descriptions and predicted characteristics of the most common segments in Travelers Rest are included in Table 4. Columns include Social Group, Lifestage, and Household categories, as well as a count of households in the primary trade area that fall into each category. In each row are predicted household characteristics, which include income, age, composition, housing tenure and type, educational attainment, employment, and race.

PRIZM Household Distribution

Each of the detailed descriptions below is provided by the Claritas descriptions of their PRIZM Lifestyle Segmentation data. The rounded percentage of households in the primary trade area and the rounded index to the United States is shown next to each description.

## Mature Years

## Back Country Folks

11\% of Households in Travelers Rest PTA, Index to United States: 416
Strewn among remote farm communities across the nation, Back Country Folks are a long way away from economic paradise. The residents have below average incomes and live in older, modest-sized homes and manufactured housing. Typically, life in this segment is a throwback to an earlier era when farming dominated the American landscape.

## Heartlanders

6\% of Households in Travelers Rest PTA, Index to United States: 492
This widespread segment consists of mostly retired older couples living in sturdy, unpretentious homes. In these communities of small families and empty-nesting couples, Heartlanders residents pursue a rustic lifestyle where hunting and fishing remain prime leisure activities along with cooking, sewing, camping, and boating.

## Golden Ponds

7\% of Households in Travelers Rest PTA, Index to United States: 393
Golden Ponds is mostly a retirement lifestyle, dominated by downscale singles and couples over 50 years old. Found in small bucolic towns around the country, these high school-educated seniors live in small apartments on less than \$30,000 a year. Daily life is often a succession of sedentary activities such as reading, watching TV, playing bingo, and doing craft projects.

## Country Casuals

6\% of Households in Travelers Rest PTA, Index to United States: 350
There's a laid-back atmosphere in Country Casuals, a collection of older, midscale empty-nest households. Today, these Baby-Boom couples enjoy outdoor activities, like hunting, and going out to eat but are not likely to be up-to-date on technology.

## Mayberry-ville

6\% of Households in Travelers Rest PTA, Index to United States: 355
Like the old Andy Griffith Show set in a quaint picturesque burg, Mayberry-ville harks back to an old-fashioned way of life. In these small towns, upscale couples prefer outdoor
activities like fishing and hunting during the day, and stay home and watch TV at night. Overall, their use of technology trails that of others at their same asset level.

## Simple Pleasures

3\% of Households in Travelers Rest PTA, Index to United States: 217
With many of its residents over 65 years old, Simple Pleasures is mostly a retirement lifestyle: a neighborhood of lower-middle-class singles and couples living in modestly priced homes. Many are high school-educated seniors who held blue-collar jobs before their retirement.

## Family Life

## Country Strong

14\% of Households in Travelers Rest PTA, Index to United States: 444
Country Strong are blue-collar, lower middle class families in rural areas. They are focused on their families and prefer hunting and country music to keeping up with the latest technology.

## Big Sky Families

8\% of Households in Travelers Rest PTA, Index to United States: 326
Big Sky Families is a segment of middle-aged rural families who have turned high school educations and blue-collar jobs into busy, upper-middle-class lifestyles. Residents enjoy country music and all types of team sports and outdoor activities, especially hunting.

## Campers and Camo

5\% of Households in Travelers Rest PTA, Index to United States: 290
Campers \& Camo families enjoy the outdoors and tend to live in rural areas. Age ranges are 35-54 and they tend to be lower-income with a high school graduation. A top segment for ownership of an RV, they also enjoy hunting and fishing. They prefer a value when shopping, traveling, and eating out.

## Fast-Track Families

4\% of Households in Travelers Rest PTA, Index to United States: 199
Fast-Track Families is composed of individuals aged 35-54 that are college graduates with upscale incomes. They have busy schedules, are frequent restaurant diners, drive larger SUVs, visit Pinterest, and tend to shop in bulk at wholesale clubs.

## Younger Years

Young \& Rustic
8\% of Households in Travelers Rest PTA, Index to United States: 405
Young \& Rustic is composed of restless singles and young families. These folks tend to be lower-middle income, high school-educated, and live in the nation's exurban towns. With their service industry jobs and modest incomes, these folks still try to fashion fast-paced lifestyles centered on sports, cars, and dating.

Red, White and Blue
7\% of Households in Travelers Rest PTA, Index to United States: 500
Red, White \& Blue is composed of middle-aged residents with high school educations and ower incomes that tend to live in rural areas. Many of these folks are transitioning from blue-collar jobs to the service industry. In their spare time, they are active members of their local community organizations.

These categories are based on national data and all descriptions are general enough to see the kind of household composition that exists in the primary trade market.

### 2.3.4 Key Observations

Key observations from the market segmentation data include the following:

- The share of older households in the primary trade area is increasing, with $45 \%$ of households in the "Mature Years" Lifestage group.
- Over two-thirds of households in the primary trade area enjoy outdoor activities, such as hunting, fishing, hiking, and sports. This is a strong reflection of the character of Northern Greenville County. It also presents an opportunity to provide goods and services that facilitate active, outdoor, rustic lifestyles.
- Households in the primary trade area are largely mid- to low-scale in terms of their socioeconomic status. Thirty-eight percent of households fall within the lowest income segments of Lifestage segmentation categories.

### 2.4 Retail Market Analysis

Travelers Rest is a retail center serving the primary and secondary markets defined above. In this section the Travelers Rest market will be examined to identify potential opportunities for new or expanded stores by examining "retail leakage." This will allow the community to assess what kind of additional stores might be attracted to Travelers Rest and will help individual existing businesses understand how they might diversify product lines.

### 2.4. Retail Leakage in the Trade Areas

Retail leakage refers to the difference between the retail expenditures by residents living in a particular area and the retail sales produced by the stores located in the same area. If desired products are not available within that area, consumers will travel to other places or use different methods to obtain those products. Consequently, the dollars spent outside of the area are said to be "leaking." If a community is a major retail center with a variety of stores it will be "attracting" rather than "leaking" retail sales. Even large communities may see leakage in certain retail categories while some small communities may be attractors in categories.

Such an analysis is not an exact science. In some cases large outflow may indicate that money is being spent elsewhere (drug store purchases at a Walmart or apparel purchases through the internet). It is important to note that this analysis accounts best for retail categories where households (rather than businesses) are essentially the only consumer groups. For example, lumberyards may have business sales that are not accounted for in consumer expenditures. Stores such as jewelry shops and clothing stores are more accurately analyzed using this technique.

The leakage study for Travelers Rest is a "snapshot" in time. Consequently, there are factors that point to this being a more conservative or more aggressive look at retail potential depending on what factors are examined. For example, population growth means that there will be more customers in the future resulting in greater demand for retail.

However, this leakage study only examines the primary and secondary trade areas identified for Travelers Rest. The primary trade area data comes from the Travelers Rest, Slater-Marietta, and Cleveland zip codes and the Furman University, Greenville-29609, and Greenville-29617 zip codes defined as Travelers Rest's secondary trade area. A successful store model might capture from well beyond this geography and could foster a strong visitor market as well.

As of May 2017, the primary trade area had $\$ 266.1$ million in retail sales and $\$ 547.4$ million in consumer expenditures over the past year, indicating that the primary trade area is leaking $\$ 281.3$ million in sales annually.

The Travelers Rest secondary trade area generated $\$ 573.1$ million in retail sales and $\$ 1.05$ billon in consumer expenditures over the past year. The secondary trade area experienced annual leakage of $\$ 480$ million.

The combined trade area for Travelers Rest is a "leaking market" to the tune of \$761 million each year.

The table below compares 2012 retail leakage to 2017 retail leakage. While consumer expenditures have increased by $26 \%$ in both the primary and secondary trade areas, retail sales grew by only $2 \%$ in the secondary trade area and decreased by $39 \%$ in the primary trade area.

| Retail Leakage, 2012-2017 | PTA |  |  | STA |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | (Consumer Expenditures) | (Retail <br> Sales) | Leakage (Inflow) | (Consumer Expenditures) | (Retail <br> Sales) | Leakage (Inflow) |
| 2012 | 434,579,738 | 434,686,440 | $(106,702)$ | 832,486,111 | 562,524,706 | 269,961,405 |
| 2017 | 547,395,257 | 266,134,269 | 281,260,988 | 1,053,055,636 | 573,054,333 | 480,001,303 |
| Change 2012 2017 | 26\% | -39\% |  | 26\% | 2\% |  |

### 2.4.2 Detailed Retail Market Opportunity Tables

Table 5 details the individual retail categories where Travelers Rest is leaking and gaining sales in both the primary and secondary trade areas. This data should be used as an overall guide to retail market potential and should not substitute for detailed market research on the part of any business wishing to open in the area.

The lefthand column indicates retail store types along with NAICS codes for these stores. Please note that some categories are subsets of larger categories. The other columns represent the consumer demand in Travelers Rest's trade areas. Red numbers indicate an inflow of dollars and black numbers indicate market leakage.

### 2.4.3 Retail Shares Analysis

Retail shares analysis compares Travelers Rest's primary trade area sales figures to fifteen- and thirty-minute drive-time areas (in all directions from the corner of Main Street and Center Street). According to Claritas, Travelers Rest's primary trade area enjoys a 21 percent share of the fifteen-minute-drive time region and a 2.8 percent of the larger thirty-minute drive-time region.

In both cases, the retail shares distribution is mixed, with key local strengths in Sporting Goods showing how significant a handful of local businesses (in this case, Sunrift Adventures) are not just to Travelers Rest but to the region as a whole. At the same time, Travelers Rest registers relatively low shares in Electronics and Appliance Stores, and Clothing and Clothing Accessories categories. These low figures are ascribable to the strength of nearby draws such as Haywood Mall and the Shoppes at Greenridge rather than any major shortcoming in Travelers Rest. These data also indicate opportunities in the Foodservice and Drinking Places and in Specialty Food Stores categories.

Table 6: Travelers Rest Retail Shares Analysis (3 of 3).

### 2.4.4 Retail Space Demand

Retail space demand is an estimate of how much retail space a market can comfortably absorb in sales leakage from its trade areas. The table below shows calculated capture in square feet by retail category based on three assumptions: one, that new or expanded businesses in Travelers Rest can capture twenty percent of sales leakage from its primary trade area; two, that these businesses can capture an additional ten percent of sales leakage from its secondary trade area; and three, that the sales per square foot figures in the purple column hold true for the business in question. (The majority of the sales per square foot data come from the Urban Land Institute's Dollars and Cents of Retail publication.) Although the calculated capture figures in the right hand column appear precise, they are nonetheless estimates and should be regarded as such.

Key observations of the retail space demand estimate include the following:

- The 2012 study identified demand for food service establishments. In 2017, there continues to be a demand for food service establishments, particularly full-service restaurants.
- There is demand for clothing and accessories offerings, especially for family clothing, womens clothing and shoes.
- There is also significant demand for General Merchandise stores.

Table 7: Travelers Rest Retail Space Demand Estimates.

### 2.4.5 Key Market Opportunities

The retail market potential for Travelers Rest combines many different facets of the data gathered above. Not simply a collection of numbers, retail markets depend on both quantitative and qualitative information. Moreover, just because there is retail market potential for a potential retail store type in no way ensures that success of that store type in the community. There are many reasons why a business might succeed or fail and the retail market is but one of those factors. However, this does provide a synopsis guide for the "best potential" retail opportunities in Travelers Rest. These market opportunities are as follows:

## Limited- and Full-Service Restaurants

This category represents a major opportunity for the City of Travelers Rest. The primary trade area experienced retail leakage of $\$ 17$ million in full-service and $\$ 5.9$ million in limited-service restaurants. A retail capture scenario suggests the City of Travelers Rest could absorb over 60,000 square feet of restaurant space in downtown and along the U.S. 25 corridor. Additionally, the success of pacesetter businesses such as the Café @ Williams Hardware indicate that the restaurant cluster in Travelers Rest can continue to grow, especially along the Swamp Rabbit Trail.

## Clothing \& Accessories

Although many local households are likely to shop online or at the large clothing retailers at Cherrydale, Haywood Mail, or the Shoppes at Greenridge, there remains significant opportunity for additional offerings within this broad category. The Travelers Rest's primary trade area experienced $\$ 21.7$ million in the clothing and accessories category. A capture scenario of nearly 30,000 square feet would likely include offerings in specialty clothing as well as women's clothing, family clothing, shoes, and jewelry.

## "Trail-Friendly" Offerings

"Trail-Friendly" is not a retail category, but rather a business approach that acknowledges the importance of the Swamp Rabbit Trail by focusing on the trail user (or least by using the trail as a marketing tool). Trail-friendly retail may involve the sale of small gifts, snacks, or heritage-based goods (such as a moonshine distillery). Furthermore, it may include the construction of trailside infrastructure (such as bike racks, public restrooms, trailside entrances) to "pull" people off the trail and into local shops.

## Food-Based Retail

Retail leakage data and the success of businesses like the Swamp Rabbit Grocery \& Café (located along the Swamp Rabbit Trail outside of downtown Greenville) indicate
market demand for specialty grocery offerings. The retail analysis, combined with the success of the Travelers Rest Farmers Market, indicates additional opportunities for niche food stores.

### 2.5 Overall Observations and Conclusions

Based on the above findings, Travelers Rest has the opportunity to expand its retail presence for not only for the downtown district but also throughout the City. Retail expansion in Travelers Rest is likely to involve the concerted effort of the public and private sectors. The following conclusions will form the basis of the recommendations to follow in Chapter Four of this report:

- Population in Travelers Rests's primary trade area grew by $7.8 \%$ from 2010 to 2017 and is projected to grow by another $5.8 \%$ by 2022 . Incomes are also on the rise. The median household income in the primary trade area increased by $20 \%$ from 2012 to 2017.
- As the primary trade area has grown, it has also aged. $45 \%$ of households are in the "Mature Years" Lifestage segment.
- Since 2012, consumer expenditures have grown by $26 \%$ in both the primary and secondary trade area. Over the same 5 -year period, retail sales grew by only $2 \%$ in the secondary trade area and declined by $39 \%$ in the primary trade area, resulting in significant leakage in both the primary and secondary trade areas. It is important to note that the methodology used by Claritas has also changed during this time which may account for the represented decline in sales.
- Retail leakage varies by category. Opportunities exist to capture some of the existing leakage in key categories such as restaurants, clothing, and general merchandise.
- The economic impact of Swamp Rabbit Trail is strong and is likely to strengthen, especially for downtown restaurants and specialty retailers.
